TURNING POINTS OF THE LIFE-COURSE

(Social, demographic panel survey)
WAVE 1

November 2001 – January 2002

INTRODUCTION

This survey is being conducted by the Demographic Research Institute of the Hungarian Central Statistical Office as part of an international research project. The aim is to find out about the everyday life, living conditions and opinions of individuals and families; to learn what factors influence the formation of families, child-bearing, and preparing for the years of retirement; how young people and the older generations live and what opinion people hold about them. These things, of course, also depend on what stage of life a person is in:

- whether a person has just finished school, is beginning an independent life, setting up a family, or
- already has children, or
- elderly, perhaps already in retirement.

This is why we contact around 15,000 people throughout the country between the ages of 18 and 75, to get to know the particular problems of each age group.

The interesting feature of this survey is that we would like to contact the same people again in three years to find out what course their lives have taken, what changes have occurred in their work and family life and whether they have succeeded in carrying out their plans.

The results will be used in a variety of ways by experts whose vocation and job it is to deal with the education of young people, the social situation of families and the problems of the elderly.

We would like you to help us attain these aims by agreeing to take part in the survey, now and in three years' time. The Demographic Research Institute is planning to inform you from time to time on the results as we are sure you will be interested in the responses other people gave to various questions. However, since the data will be processed anonymously, this information will cover only summary results.

Your name and address have been chosen at random from the national population register. We will preserve your name and address so that we can keep in touch with you. However, this will not be recorded since the data will be processed anonymously. The law requires the Hungarian Central Statistical Office and the Demographic Research Institute to treat your personal data confidentially.

It will take around an hour to fill in the questionnaire.
